Key Tactical Signals

- Argentina's attacking output reduced after half-time: shot change +0, xG change -0.96.
- Enzo Fernandez (Argentina) is appearing substantially deeper in second-half event locations (-10.1 X units).

Passing & Build-up

Argentina: top passer Enzo Fernandez; strongest link Nicolás Hernán Otamendi → Cristian Gabriel Romero (18 passes).
France: top passer Aurélien Djani Tchouaméni; strongest link Raphaël Varane → Dayotchanculle Upamecano (16 passes).

Analyst Summary

Argentina showed the stronger event-based territory profile. Argentina produced more progressive actions, while Argentina generated the higher cumulative xG.

SHOT ANALYSIS

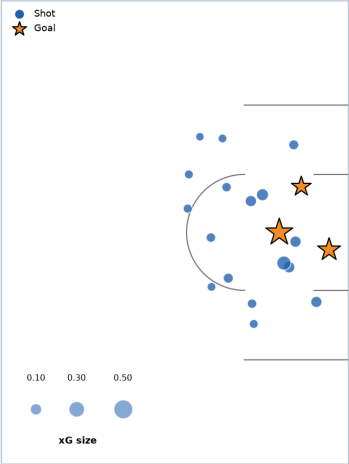

Argentina vs France

ARGENTINA

ARGENTINA - SHOT MAP

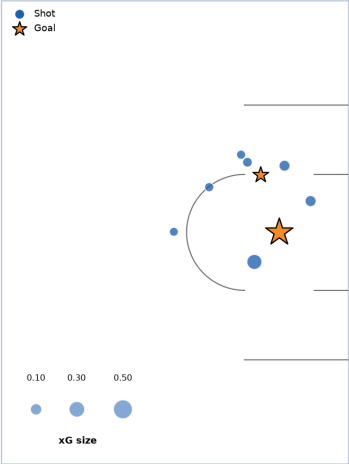

Full Match | 20 shots | 10 on target | 3 goals | 2.76 xG

FRANCE

FRANCE - SHOT MAP

Full Match | 10 shots | 5 on target | 3 goals | 2.27 xG

SHOT ANALYSIS COMPARISON

Argentina	Metric	France
20	Shots	10
10	Shots on Target	5
3	Goals	3
2.76	Total xG	2.27
0.14	Average xG / Shot	0.23
4	High-quality chances (xG >= 0.20)	3

ANALYST INTERPRETATION

- Volume: Argentina produced the higher shot volume (20 vs 10).
- Chance creation: Argentina generated the higher total xG (2.76 vs 2.27).
- Efficiency: France produced the higher average chance quality (0.227 vs 0.138 xG per shot).
- Key threats: Lionel Messi led Argentina in xG (1.46); Kylian Mbappé led France (1.78).

Shot locations use StatsBomb 120 x 80 coordinates.

Marker size represents StatsBomb xG; star = goal.

Full Match excludes penalty-shootout period 5.

TACTICAL MOMENTUM

KEY PLAYER POSITION SHIFTS

ARGENTINA

- ↓ Ángel Di María: 19.3 X units deeper
- ↓ Enzo Fernández: 10.1 X units deeper
- ↑ Nahuel Molina: 5.5 X units higher

FRANCE

- ↓ Marcus Thuram: 20.3 X units deeper
- ↑ Randal Kolo: 13.5 X units higher
- ↑ Jules Koundé: 11.1 X units higher

ANALYST INTERPRETATION

- Argentina's attacking output reduced after half-time: shot change +0, xG change -0.96.
- France are operating higher up the pitch in the second half (+5.9 average action-position units).
- France's pressure-event volume increased by 34% in the second half.
- France's attacking output increased after half-time: shot change +6, xG change +1.16.

Average X uses StatsBomb event coordinates.

Player shifts compare average first-half vs second-half event locations.

Signals are analytical indicators, not confirmed tactical instructions.

ANALYST CONCLUSIONS & COACHING TAKEAWAYS

Argentina 3 - 3 France

FRANCE

HEADLINE EVIDENCE

Goals	3	3
xG	2.76	2.27
Shots	20	10
Pass completion	80.8%	76.1%
Territory Index	39.0	37.7
Progressive Actions	206	184
Final Third Entries	51	48
Box Entries	38	25

KEY ANALYST FINDINGS

- Chance quality: Argentina generated the higher cumulative xG by approximately 0.49.
- Shot volume: Argentina recorded the higher shot total (20 vs 10).
- Territory: Argentina recorded the stronger event-based territory profile.
- Progression: Argentina produced 22 more progressive actions under the project definition.
- Passing hubs: Argentina - Enzo Fernandez; France - Aurélien Djani Tchouaméni.
- Tactical review prompt: Argentina's attacking output reduced after half-time: shot change +0, xG change -0.96.

PRIORITY VIDEO REVIEW

- Review the sequences behind Argentina's higher xG and identify whether central access, transitions, set plays or rebounds drove the advantage.
- Compare build-up structures around Enzo Fernandez and Aurélien Djani Tchouaméni.
- Review why Argentina produced the stronger progression profile and whether passing, carrying, game state or opponent behaviour explains it.
- Use Tactical Analysis and Live Intelligence timelines as timestamps/themes for targeted video review.

ARGENTINA

METHODOLOGY & INTERPRETATION BOUNDARIES

FRANCE

This page separates event-derived analytical signals from claims that would require continuous tracking data, broader model validation, or direct coaching evidence.

INTERPRETATION BOUNDARIES

- Event locations are not tracking data. Average positions and territory indicators describe where recorded actions occurred, not continuous player positions.
- Territory Index is a project-defined event indicator. It is not official possession or spatial-control tracking.
- Progressive actions use the project definition: completed passes or carries advancing the ball by the configured StatsBomb X-distance threshold.
- Live Intelligence is a transparent multi-signal heuristic. Intelligence Advantage is not a win probability.
- Predictive Intelligence is experimental. Outcome estimates are based on historical match-state snapshots and must be interpreted alongside validation accuracy, macro F1 and log loss.
- Tactical signals are analytical flags. Changes in event locations and event volumes do not confirm formation changes or coaching instructions.

RECOMMENDED WORKFLOW

Use the Executive Overview for rapid scanning, inspect the focused section pages for evidence, and validate important patterns with match video before making tactical or coaching conclusions.
