Key Tactical Signals

- Borussia Dortmund are operating higher up the pitch in the second half (+13.2 average action-position units).
- Borussia Dortmund's attacking output increased after half-time: shot change +2, xG change +0.29.

Passing & Build-up

Borussia Dortmund: top passer Nico Schlotterbeck; strongest link Nico Schlotterbeck → Gregor Kobel (24 passes).
Bayer Leverkusen: top passer Edmond Fayçal Tapsoba; strongest link Piero Martín Hincapié Reyna → Alejandro Grimaldo García (21 passes).

Analyst Summary

Bayer Leverkusen showed the stronger event-based territory profile. Bayer Leverkusen produced more progressive actions, while Bayer Leverkusen generated the higher cumulative xG.

Generated by LiveMatch Intelligence | StatsBomb event data | Event-derived indicators and transparent project heuristics

How to use this page: the dashboard is the rapid visual summary. The following pages explain what the indicators suggest, where the evidence is strongest, and which areas may deserve video review or coaching attention.

1. Match Interpretation

The match finished 1-1. The event data shows a stronger underlying attacking profile for **Bayer Leverkusen**, with an xG advantage of approximately **0.81**. xG should be interpreted as chance quality rather than a guarantee of goals.

Indicator	Borussia Dortmund	Bayer Leverkusen
Goals	1	1
xG	0.55	1.36
Shots	8	13
Pass completion	85.2%	86.3%
Pressures	208	151

What the attacking numbers suggest

- Bayer Leverkusen generated the higher cumulative xG. This suggests the quality of their recorded shooting opportunities was stronger overall.
- Bayer Leverkusen recorded more total shots (13 versus 8). The shot map should be used alongside xG to distinguish shot volume from shot quality.
- The shot-map marker sizes represent xG, so larger markers indicate higher-quality chances. Goal markers show where the scoring events occurred.

Territory and progression

Bayer Leverkusen recorded the stronger event-based territory index. Meanwhile, **Bayer Leverkusen** produced more progressive actions by **36**, with a difference of **29** final-third entries and **13** box entries between the teams. Together, these indicators describe how effectively each side moved activity into advanced areas.

Indicator	Borussia Dortmund	Bayer Leverkusen
Territory Index	31.8	42.3
Average Event X	49.5	62.3
Attacking Third Share	17.7%	27.8%
Progressive Actions	145	181
Final Third Entries	31	60
Box Entries	19	32

2. Tactical & Player Intelligence

The tactical signals below are generated from changes in event locations and event counts. They are useful analyst flags for further review, but they are not proof of a specific coaching instruction or exact optical-tracking formation.

Passing and build-up

- Borussia Dortmund: top passer **Nico Schlotterbeck**; strongest completed connection **Nico Schlotterbeck** → **Gregor Kobel** (24 passes).
- Bayer Leverkusen: top passer **Edmond Fayçal Tapsoba**; strongest completed connection **Piero Martín Hincapié Reyna** → **Alejandro Grimaldo García** (21 passes).

These passing-network indicators help identify the players most central to circulation and the combinations most frequently used in completed passing sequences. They should be paired with video review before drawing conclusions about tactical intent.

Leading progression contributors

Player	Progressive actions	Final-third entries	Box entries
Edmond Fayçal Tapsoba	47	14	0
Nico Schlotterbeck	32	8	2
Piero Martín Hincapié Reyna	25	4	0
Mats Hummels	24	4	1
Gregor Kobel	23	0	0
Jonathan Tah	17	5	0

Automated tactical signals

- Borussia Dortmund are operating higher up the pitch in the second half (+13.2 average action-position units).
- Borussia Dortmund's attacking output increased after half-time: shot change +2, xG change +0.29.
- Emre Can (Borussia Dortmund) is appearing substantially higher in second-half event locations (+15.9 X units).
- Jadon Sancho (Borussia Dortmund) is appearing substantially higher in second-half event locations (+23.0 X units).
- Jamie Jermaine Bynoe-Gittens (Borussia Dortmund) is appearing substantially higher in second-half event locations (+12.7 X units).
- Julian Brandt (Borussia Dortmund) is appearing substantially higher in second-half event locations (+16.4 X units).

3. Coaching Takeaways

These takeaways are designed as evidence-led prompts for staff discussion and video review. They deliberately avoid presenting event-data patterns as confirmed tactical instructions.

Priority review areas

- Review the sequences behind Bayer Leverkusen's higher xG: identify whether the advantage came from central access, transitions, set plays, rebounds, or repeated entries into dangerous areas.
- Compare the build-up structures around Nico Schlotterbeck and Edmond Fayçal Tapsoba. Their involvement suggests they were important circulation hubs in the recorded passing data.
- Review why Bayer Leverkusen produced the higher progressive-action total and whether the difference was driven more by progressive passing, carrying, game state, or opponent behaviour.
- Use the first-half versus second-half tactical alerts as timestamps or themes for video review rather than treating them as confirmed formation changes.

Interpretation boundaries

- **Event locations are not tracking data.** Average positions and territory indicators describe where recorded actions occurred, not continuous player positions.
- **Progressive actions use the project definition.** They are completed passes or carries that advance the ball by the configured StatsBomb X-distance threshold.
- **Territory Index is an event-based project indicator.** It is not official possession or spatial-control tracking.
- **Momentum is a transparent heuristic.** It should not be described as a trained prediction model.
- **Experimental ML probabilities are research estimates.** They should not be treated as production-grade forecasting probabilities without broader validation and calibration.

Recommended workflow: use the one-page dashboard for rapid scanning, use this PDF to interpret the indicators, then use match video to validate the most important tactical and player-level observations.
