TACTICAL MOMENTUM

KEY PLAYER POSITION SHIFTS

ARGENTINA

- ↓ Angel Di María: 19.3 X units deeper
- ↓ Enzo Fernandez: 10.1 X units deeper
- ↑ Nahuel Molina: 5.5 X units higher

FRANCE

- ↓ Marcus Thuram: 20.3 X units deeper
- ↑ Randal Kolo: 13.5 X units higher
- ↑ Jules Koundé: 11.1 X units higher

ANALYST INTERPRETATION

- Argentina's attacking output reduced after half-time: shot change +0, xG change -0.96.
- France are operating higher up the pitch in the second half (+5.9 average action-position units).
- France's pressure-event volume increased by 34% in the second half.
- France's attacking output increased after half-time: shot change +6, xG change +1.16.

Average X uses StatsBomb event coordinates.

Player shifts compare average first-half vs second-half event locations.

Signals are analytical indicators, not confirmed tactical instructions.

TACTICAL EVIDENCE TABLE

Team	First Half Avg X	Second Half Avg X	Pressure Change %	Shot Change	xG Change	Attack Index Change
Argentina	57.32	57.36	13.6	0	-0.96	-16.1
France	55.57	61.5	33.9	6	1.16	114.0

KEY PLAYER POSITION SHIFTS

Team	Player	First Half X	Second Half X	X Change
Argentina	Ángel Di María	83.37	64.07	-19.30
Argentina	Enzo Fernandez	57.61	47.47	-10.14
Argentina	Nahuel Molina	50.40	55.86	+5.46
France	Marcus Thuram	87.25	66.97	-20.28
France	Randal Kolo	66.38	79.92	+13.54
France	Jules Koundé	45.39	56.46	+11.08

INTERPRETATION BOUNDARIES

- Tactical-change signals compare recorded first-half and second-half event behaviour; they do not prove a manager changed formation or issued a specific tactical instruction.
- Average X and player-position shifts use average StatsBomb event locations, not continuous optical-tracking positions.
- Pressure, shots, xG and Attack Index changes should be interpreted with game state, substitutions, opponent behaviour and match context.
- Large player shifts can reflect role changes, substitutions or different event involvement and should be treated as analyst flags rather than exact positional coordinates.
